

References

The following Indian Standards and regulations provide the legal framework and guidelines for effective fire safety training. These references highlight the mandates and best practices required for ensuring comprehensive fire safety training:

- **IS 15683:2020 - Fire Safety Engineering**
Outlines principles and practices for fire safety engineering, including training requirements for personnel.
- **IS 14489:1998 - Fire Fighting Equipment**
Specifies standards for fire fighting equipment and includes recommendations for training on its use and maintenance.
- **OISD-STD-116 - Fire Protection Systems for Oil & Gas Industry**
Provides guidelines for fire safety systems and mandates training for personnel in the oil and gas sector.
- **OISD-154 - Fire and Safety Regulations**
Details requirements for fire and safety regulations, including specific training mandates for personnel in hazardous industries.
- **OISD-STD-170 - Emergency Response and Safety Training**
Specifies the training requirements for emergency response and safety management in high-risk industries.
- **OISD-STD-226 - Fire Safety Management**
Outlines training requirements for fire safety management practices and personnel responsibilities.
- **Factories Act, 1948**
 - **Section 41-C - Safety and Health**
Requires the provision of fire safety training and safety measures for workers.
 - **Rule 61 (Sub-rules) - Fire Fighting Arrangements**
Specifies training requirements for firefighting and emergency procedures.
- **National Building Code (NBC) of India**
Offers guidelines on building safety, including provisions for fire safety training in construction and occupancy.

These standards and regulations serve as essential references, ensuring that your fire safety training programs comply with legal and industry requirements.
